FENKELL TRUCK TIPS

✓ CHECK YOUR TIRES.

Keep an eye on your tire pressure, especially if you're on a long trip. Under-inflated tires can decrease your fuel mileage and make steering difficult. Too much air can be a problem too, causing the tire to be more prone to punctures or pothole damage.

✓ FLUID LEVELS.

All fluids should be checked regularly, especially your oil. This can prevent damage to your truck's engine and avoid unnecessary repair costs.

✓ CHECK YOUR LIGHTS.

By checking interior and exterior lights, you can detect a larger problem before it becomes worse. It doesn't hurt to keep a few spare fuses in the glove box should an electrical issue occur.

✓ READ UP.

Your owner's manual is an important tool when it comes to the maintenance of your truck. Optimal fluid levels, oil and other ways to keep your truck up and running is in your manual.

✓ STOP IN FOR AN INSPECTION.

Have Fenkell's ASE-certified technicians run a comprehensive inspection to keep you on the road longer!
